Professional Summary

Computer Science undergraduate specializing in Data Science with a strong foundation in Python, SQL, Machine Learning, Deep Learning, and Data Analysis. Experienced in developing AI solutions and applying machine learning and deep learning techniques to real-world projects, with an interest in emerging technologies.

Education

University of Petroleum and Energy Studies (UPES), Dehradun <i>B.Tech in Computer Science (Data Science), CGPA: 8.04</i>	Aug 2023 – Present
Arwachin Bharti Bhawan Sr. Sec. School, Delhi <i>Class XII (CBSE), Grade: 70.8%</i>	2022 – 2023
Arwachin Bharti Bhawan Sr. Sec. School, Delhi <i>Class X (CBSE), Grade: 80.8%</i>	2020 – 2021

Skills

Programming Languages: Python, C++, SQL

Machine Learning/Deep Learning: Supervised Learning, Unsupervised Learning, Regression, Classification, Feature Engineering, Model Evaluation, Ensemble Learning, CNN, Transfer Learning, NLP

Technologies/Frameworks: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, TensorFlow, PyTorch, Keras

Databases/Tools: MySQL, Power BI, GitHub, Jupyter Notebook, Google Colab, VS Code

Coursework: Data Structures and Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming (OOP), Machine Learning

Internships

IBM <i>Data Science Intern</i>	June 2026 – July 2026
- Developing a Job Market Trend Analysis System to analyze 97,682+ Indian job postings, identify in-demand skills, salary trends, and hiring patterns using Python and data analytics. - Performing data preprocessing, exploratory data analysis (EDA), NLP, TF-IDF, and LDA Topic Modeling to extract meaningful insights from structured and unstructured job-market data. - Developing and comparing Linear Regression, Random Forest Regression, and XGBoost Regression models for salary prediction using feature engineering and model evaluation techniques.	

Projects

Automated Skin Disease Detection System <i>Tech Stack: Python, TensorFlow, Keras, CNN, MobileNetV2, NumPy, Pandas</i>	Feb 2026 – May 2026
- Designed and deployed a MobileNetV2-based CNN using transfer learning to classify six skin conditions with 92.4% accuracy. - Built an image classification pipeline for preprocessing skin lesion images and generating disease predictions with confidence scores. - Implemented symptom-based inputs to support disease severity assessment and personalized recommendation generation. - Developed a custom classification head with Global Average Pooling, Dense layers, and Dropout on the pretrained MobileNetV2 feature extractor.	
Alzheimer's Disease Detection using Deep Learning (MRI-based) <i>Tech Stack: Python, PyTorch, NumPy, Matplotlib, Seaborn</i>	Jan 2026 – Apr 2026
- Designed and deployed a deep learning pipeline to classify MRI scans into four Alzheimer's stages for automated medical image classification. - Optimized model performance using transfer learning with ResNet50 and VGG16, achieving 94.21% validation accuracy. - Applied data augmentation and model evaluation techniques to reduce overfitting and improve multi-class classification performance.	

Achievements/Certificates

- Solved **100+ Problems** on LeetCode.
- Python Programming Course** — Kaggle Learn.
- Introduction to SQL** — Kaggle Learn.
- Introduction to Generative AI** — Google Cloud Skills Boost.
